SHARE International Architecture Forum Warsaw 2016 edition

Taking place on 11th October, at Marriott Hotel, SHARE International Architecture Forum is a dynamic event inspiring the audience through lectures held by renowned architects. The event includes three expoconferences, with thematic sessions on: facades, roofs, floors, insulation (RIFF conference); glass architecture and engineering (INGLASS conference); landscape architecture and urban infrastructure (LAUD conference).

The forum conceptualized by Proevent cultural association founded by the professional event organizer ABplus Events is realized under the Honorary Patronage of IARP-the National Chamber of Architects of the Republic of Poland, in partnership with SARP – The Association of Polish Architects, Warsaw branch, and DAFA - the Association of Flat Roofing and Facade Contractors.

ABOUT

Networking, Business, Inspiration

The future in façade design and engineering; new designs of roofs, floors and insulation; innovative landscape works and directions for urbanization; iconic glass projects, professional solutions for the construction industry; new revolutionary materials and technologies for designing a better built environment are presented from different perspectives, by architects, landscape architects, urbanists and contractors.

We have created and organized over the past six years international architecture expo conferences in Poland, Hungary and Romania, with over 6.500 architects and companies from over 30 countries. We invite you to join us !

SPEAKERS

Arch. Ryszard Gruda

President National Chamber
of Architects of the Republic
of Poland – IARP

Arch. Borysław Czarakczew

Member of the Board and
Plenipotentiary for international
matters, National Chamber of
Architects of the Republic of
Poland – IARP

Arch. urb. Marlena Happach

President SARP Warsaw-Association
of Polish Architects

Florin Mindirigiu

CEO ABplus EVENTS

„Adaptive Building Skins“

Masterclass by prof. dr. eng. Jan KNIPPERS

October 11th
Warsaw Marriott Hotel, Baltic III
12.00-13.20

Jan Knippers specialises in complex parametrical generated structures for roofs and façades, as well as the use of innovative materials such as glass-fibre reinforced polymers. Since 2000 Jan Knippers is head of the Institute for Building Structures and Structural Design (ITKE) at the University of Stuttgart and involved in many research projects on fiber based materials and biomimetics in architecture. He completed his studies of civil engineering at the Technical University of Berlin in 1992 with the award of a PhD.

Knippers Helbig Advanced Engineering has offices in Stuttgart, New York City and Berlin and works in collaboration with internationally renowned architects, like Massimiliano Fuksas, Grimshaw Architects or Stefan Behnisch.

The focus is on the development and programming of special solutions for complex parametrical or generated geometries of roof constructions and of façades comprising steel and glass structures, as in the façade of the Shenzhen International Airport, which features 60,000 different façade units.

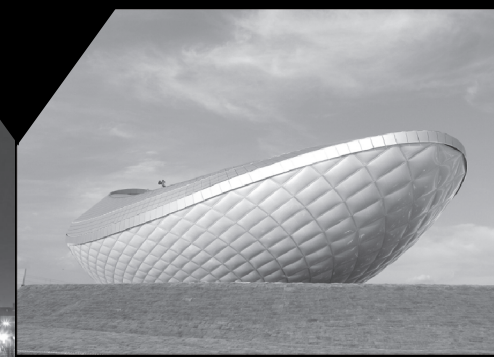

The design and development of the largest membrane roof world-wide, covering the 1,000 m long and 100 m wide main entrance building on the World-Exposition in Shanghai, originates by Knippers Helbig Advanced Engineering, as well as the steel and glass structure of the shopping mall MyZeil in Frankfurt on the Main and the roofing of the shopping mall Westfield near London.

2015 ICONIC AWARDS in the category
,Concept - Visionary Architecture / 2015
Staatspreis Baukultur Baden
Württemberg / 2014 architizer A+
awards' in the following categories:
popular winner architecture +
engineering / popular winner airports
/ jury winner airports for Shenzhen
Airport / 2014 Iconic Awards /

/2013 Emerging Architecture /2012
International Bionic Award / 2006 RIBA
International Awards

AWARDS:

Partner, Knippers Helbig Advanced Engineering,
Stuttgart, GERMANY
Professor, Head of the Institute of Building
Structures and Structural Design at the University
of Stuttgart (ITKE)

"Future façades should be responsive to both internal and external conditions. With the use of parametric and multi-criteria optimization tools, façades can be designed to respond to various requirements. The capacity for building skin to actively support building function is critical to the future of façade design."

**VISIONARY ARCHITECTURE,
INNOVATIVE MATERIALS,
CUTTING-EDGE TECHNOLOGIES
AND SYSTEMS**

3 thematic expoconferences & highly-awarded projects presented by their creators, at

RIFF (façades, floor, roofs, insulation),
INGLASS (glass architecture &
engineering), LAUD (landscape
architecture & urban infrastructure)

with guests speakers that are
winners of the most recent editions
of international architecture
competitions, from 12 countries:
Australia, Germany, UK, The
Netherlands, Denmark, Turkey,
Spain, Italy, Bulgaria, Belgium,
Switzerland and Poland

Special Guest arch. Robert
Konieczny from KMK Promes,
joint winner 2016 European
Prize for Urban Public Space

KMK Promes

HIGHLIGHTS

2 masterclasses inspiring the
audience of SHARE Warsaw
International Architecture Forum

Explorations into reimagining
the possible uses of glass in
construction

The benefits of implementing
BIM (Building Information
Modeling) and complex
parametrical generated
structures for roofs and façades
presented at the forum

Winner public vote 2011, RIBA Manser
Medal, UK

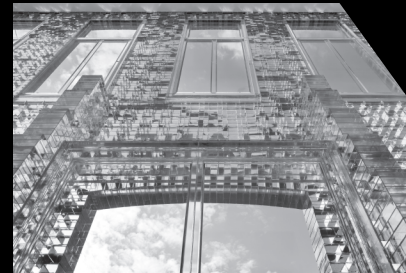

Faidra Oikonomopoulou
PhD Researcher in
Structural Glass, Faculty
of Architecture, Delft
University of Technology,
quality-control engineer
of the Crystal Houses
façade, The Netherlands

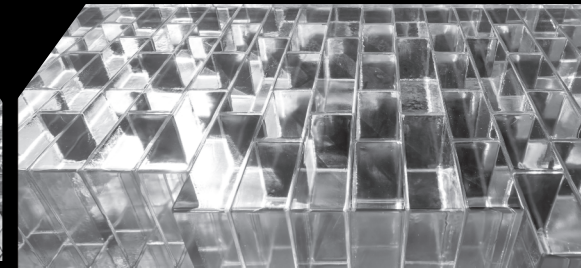

"Can stone facades or concrete walls transform into something lighter, something more ephemeral in future times? The glass bricks of the Crystal Houses show a building component on the edge of its existence. It is recognizable as a typical brick wall in texture, but at the same time escapes the naturally associated feeling of heaviness of such a wall, by changing material and becoming transparent. It is on the verge of disappearing. So what is next? A completely transparent wall? An entire facade that is there but can almost not be seen? A fully invisible building, unobtrusively occupying space whilst still fulfilling its primal functions? Can we push this until only the memory of the material remains?"

Crystal Houses, the project that will be explained in detail is conceptualised by star architect Winy Maas together with the design team including project architect Gijs Rikken, brings a poetic innovation in glass construction. Despite its delicate looks, strength tests made by TU Delft team proved that the Crystal Houses glass-construction is in many ways stronger than concrete. The new project was shortlisted in 'Shopping' category, at World Architecture Festival 2016 edition.
